Keepass For Mac

A free, open-source, KeePass-compatible password manager for macOS.

## MacPass behaves just the way a macOS app should

Keepass mac free download - WinZip Mac, Avast Free Mac Security, AVG AntiVirus for Mac, and many more programs. KeePass runs on Mac computers. It is also available for Windows 2000 and later. Is there a better alternative? Dashlane, for example, is a much more organized and easy to use program. Overall, KeePass is a very useful program. It completes its function very well. However, other options are just as good or better.

### Tabs

Open files in individual windows or use tabs to use a single window.

### Autosave

Your files will get saved constantly. Lost something and cannot recover it from an entries history? Browse versions to find what you're looking for!

### Undo/Redo

MacPass supports Undo/Redo for everything you do with your data. Something went wrong and you want to revert it, just undo your changes an you're good to go!

### Drag & Drop

Move or copy entries and groups inside a database or between two files. Add file attachments by dropping them onto entries. You even can add entries by dragging URLs onto the database.

### Quicklook

Enable previews to leverage the QuickLook system for previews of a variety of file types to take a look at your file attachments.

### But there's more...

#### Autotype

Autotype enables MacPass to supply authentication credentials for any text based input. From webforms to authentication dialogs in any application. With Global Autotype you even can invoke Autotype from anywhere with a system wide shortcut. For more information please refer to the documentation.

#### Full KDB and KDBX Support

MacPass can read and write KDB Legacy files as well as the latest KDBX Format. You can even convert KDB to KDBX and the other way around.

## Keepass For Mac Review

### Custom Icons

Change the way your entries and groups look by choosing from the many icons. If you like a bit of color, let MacPass generate icons based on websites for you!

### Password Generator

Generate passwords using the built-in generator. Adjust the method to comply with any restriction you might encounter.

### Expiration Dates

Set a date, when passwords expire. MacPass will mark them with a special icon so you'll spot them easily. You can even search for expired ones!

### Synchronization

Changes made to your database outside of MacPass can be merged. No data is lost and all files are synchronized! You even can merge arbitrary files into one single database. MacPass is able to merge even KDB files, although the format is not designed for synchronisation.

### History

If enabled, your changes to entries will get stored inside the database. Just restore an old state or take a look at what changed over time.

### Auto update

MacPass incorporates Sparkle to support auto updates. You're always up to date!

## Keepass For Mac Reddit

### Plugins

Since there's no one-size-fits-all, MacPass allows for Plugins to alter and extend its feature set. Head over to the Plugin respository and start customizing.

### Open-source

MacPass is free, open source software licensed under the GPLv3. It's build using other open source software like TransformerKit, KeePassKit, KissXML, Sparkle and a lot more. The source code is available on GitHub.

## Easy to use KeePass for iOS

KeePassium combines the security of KeePass with a clean intuitive design. Protect yourself using strong passwords — without remembering or typing them.

### Automatic Sync

KeePassium works with almost any storage provider that appears in the iOS Files app.

## Keepass For Mac 64 Bit

### Privacy

There are no ads, no trackers, no analytics. We sell the app, not the users.

### Support

The developer who cares and replies:

info at keepassium dot com

### Automatic Sync

KeePassium works with offline and online databases, including automatic two-way synchronization with your cloud storage. Almost any provider that appears in the Files app is supported.

### Password Auto Fill

With Auto Fill, you can login to websites and other apps in just a couple of taps.

### Open source

KeePassium source code is available under the GPL v3 license, so anyone can audit it.

### Sandboxing

## Sandboxing

KeePassium is an offline app. It will never ask for your server credentials. Instead, it integrates with the iOS Files app, and delegates all the networking to the cloud provider apps.

## Works with YubiKey

KeePassium supports databases protected with YubiKey hardware token. Our YubiKey integration is compatible with the challenge-response method used in KeePassXC and KeePass2Android.

## Flexible

Customizable password generator, custom entry fields, custom icons. You can also preview and export attached files, too.

## Compatible

KeePassium works great with other KeePass apps, be it KeePass itself, KeePassXC, KeePassDroid, KeePass2Android or other KeePass-compatible app. KeePassium supports all the current database formats: kdb (KeePass 1.x), kdbx3 (KeePass 2.34 and before) and kdbx4 (KeePass 2.35+), and relies on time-proven implementations of AES, ChaCha20, Twofish, and Argon2 algorithms.

## Safe

Everything is backed up: each entry keeps its history, deleted entries end up in Recycle Bin, and each database is copied before saving. (And you can disable any of these.)

Playing with the @KeePassium iOS beta — NFC support with my YubiKey 5 is looking stellar! I've been waiting for a solid iOS app that implements @KeePassXC's Challenge/Response design.

## Great app!

Definitely the app to use for keeping passwords. I use KeePass XC on my PC and KeePassium on my iOS devices. The two apps work quite well together, using cloud storage.

## Exquisite

### Keepass For Mac Review

When I initially installed KeePass on my PC, I got second doubts as to whether I'll be able to use it with my iOS devices. I stumbled upon this app and I am blown away at how polished it is. Truly, apps like these are the soul of open source. Keep it up!

## Best App for KeePass

I did not found better app for KeePass for my IPad. This one is better than everything I've tried. It looks better, has all the options I need and supports all the latest OS features.

## Prices

KeePassium is free to use. Take your time, there is no trial period.
